VICTOR JEHU-DAVID

Software Engineering Student | Full-Stack Web Developer

Portfolio: buildwithvictor.github.io/victor-builds/ GitHub: BuildWithVictor Lagos, Nigeria

PROFILE

Software Engineering student and web developer with hands-on experience building and deploying websites, web applications and business workflows. Selected work includes a live corporate website, an ongoing agricultural marketplace product, a full-stack social platform and a Microsoft Power Platform approval workflow. Comfortable working across frontend, backend, databases, APIs, testing and deployment.

EXPERIENCE & SELECTED WORK

Argo Hub — Product / Web Developer (Ongoing)

• Contributing to the development of a digital food-commerce marketplace connecting farmers, suppliers and buyers.
• Building and refining responsive marketplace experiences and distinct Buyer, Seller and Farmer journeys, including farmer discovery and farm-operations foundations.
• Working on role-based workflows and supporting marketplace features for supplier trust, demand discovery, orders and delivery; payment flows are being exercised in Paystack test mode.

Deckler Engineering Services Ltd — Web Developer

• Built and deployed a multi-page corporate website for an engineering and oil-field services company.
• Developed the responsive interface and interactive features with HTML, CSS and JavaScript, and worked on a PHP-based admin system for content updates.
• Handled deployment work including HTTPS, redirects, domain configuration, post-launch fixes and website maintenance.
• Worked on technical/on-page SEO, sitemap and robots configuration, Google Search Console and indexing setup.

ANIMXS — Full-Stack Developer

• Building an original social platform for anime and manga fans using PHP, MySQL and JavaScript.
• Developed account and email verification flows, posts, profiles, follows, communities, direct messages, notifications and moderation/admin tools.
• Built anime, manga and character discovery using external APIs, fallback logic and caching; tested web and Android/mobile builds.

Procurement Request & Approval System — App & Workflow Developer

• Built a procurement workflow using Microsoft Power Apps, SharePoint and Power Automate.
• Created a structured request process with approval routing, status changes, notifications and approval-history records.

Dotchman Engineering Services — SEO & Search Visibility

• Worked on Google Search Console, sitemap and robots configuration, indexing fixes, page metadata/on-page SEO and Google Business Profile setup.

TECHNICAL SKILLS

Development: HTML5, CSS3, JavaScript, PHP, MySQL
Web: Responsive design, REST/API integration, authentication, deployment, DNS/SSL, debugging
Microsoft: Power Apps, Power Automate, SharePoint
Tools: Git, GitHub, VS Code, cPanel
SEO: Google Search Console, technical SEO, on-page SEO, sitemap/robots, indexing

EDUCATION

B.Sc. Software Engineering — In Progress | Augustine University, Nigeria

WHAT I BRING

I learn by building, debug problems independently and improve projects beyond their first release. My work spans client websites, product development, business automation and search visibility.
