VICTOR JEHU-DAVID

Software Engineering Student | Full-Stack Web Developer

Portfolio: buildwithvictor.github.io/victor-builds/ GitHub: BuildWithVictor Lagos, Nigeria

PROFILE

Software Engineering student and web developer with hands-on experience building and deploying websites and web applications. I have worked on a live company website, built a full-stack social platform, and developed a business approval workflow with Microsoft Power Platform. I am comfortable working across frontend, backend, databases, APIs, testing and deployment, and I enjoy taking a project from an idea to something people can actually use.

EXPERIENCE & SELECTED WORK

Deckler Engineering Services Ltd - Web Developer

- Built and deployed a multi-page corporate website for an engineering and oil-field services company.
- Developed the responsive interface and interactive features with HTML, CSS and JavaScript, and worked on a PHP-based admin system for content updates.
- Handled deployment work including HTTPS, redirects, domain configuration, post-launch fixes and website maintenance.
- Also worked on technical/on-page SEO, sitemap and robots configuration, Google Search Console and indexing setup.

ANIMXS - Full-Stack Developer

- Building an original social platform for anime and manga fans using PHP, MySQL and JavaScript.
- Developed account and email verification flows, posts, profiles, follows, communities, direct messages, notifications and moderation/admin tools.
- Built anime, manga and character discovery using external APIs, fallback logic and caching.
- Tested the product on web and Android/mobile builds and worked through database, API and responsive UI issues.

Procurement Request & Approval System - App & Workflow Developer

- Built a procurement workflow using Microsoft Power Apps, SharePoint and Power Automate.
- Created a structured request process with approval routing, status changes, notifications and approval-history records.
- Worked across the app interface, SharePoint data structure and automation logic so the process operates as one connected system.

Dotchman Engineering Services - SEO & Search Visibility

- Worked on the company's search setup and visibility rather than treating launch as the end of the website work.
- Worked with Google Search Console, sitemap and robots configuration, indexing fixes, page metadata/on-page SEO and Google Business Profile setup.

TECHNICAL SKILLS

Development	HTML5, CSS3, JavaScript, PHP, MySQL
Web	Responsive design, REST/API integration, authentication, deployment, DNS/SSL, debugging
Microsoft	Power Apps, Power Automate, SharePoint
Tools	Git, GitHub, VS Code, cPanel
SEO	Google Search Console, technical SEO, on-page SEO, sitemap/robots, indexing

EDUCATION

B.Sc. Software Engineering - In Progress
Augustine University, Nigeria

WHAT I BRING

I am used to learning while building, debugging problems independently and improving projects after the first version ships. My strongest work so far spans client websites, full-stack product development, business automation and search visibility.
